

Lindab Rainline

rectangular guttering system update

Thinking outside the box

Lindab have put a twist on the box gutter with an innovative new rectangular profile

Rainline reimagined

A round bead on the forward-facing lip of the gutter is typical of Swedish style steel guttering.

The combination of this feature with a box shape creates an elegant alternative to traditional guttering whilst having an added advantage of improved functionality.

- Contemporary aesthetic
- Swedish style
- 140mm size provides 11,000mm² water carrying area

Simplified functionality

Those familiar with Lindab Rainline guttering will know how the well-designed gutter joints simplify secure installation.

The new rectangular shape with front bead allows the same type of one-piece joint to work with a box profile.

Trained professionals will also be able to use the bead design to install the system using craft jointing methods.

- Quicker to install
- Easy joint clip similar to half-round system
- Possible to join without union clips

Complete guttering system

Gutter angles

- 90 degrees internal and external options
- With round bead on outside
- Can be installed using gutter joints or using traditional craft method.

Stop ends

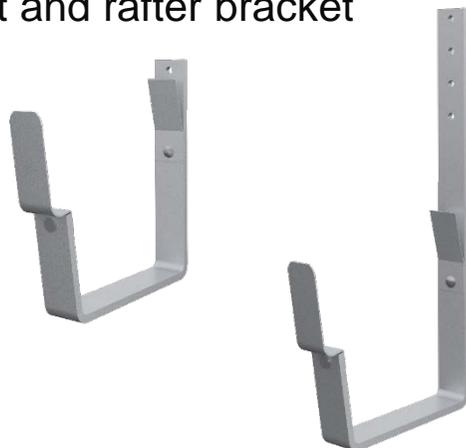

- Left hand and right hand options
- Simple push fit design

Complete guttering system

Fascia bracket and rafter bracket

- Flexible clips hold the gutter in place at the front and back
- Multiple screw holes offer secure fixing

Nozzle

- Connection for round Rainline pipes
- Easy clip fixing at any point of gutter
- 75mm, 87mm and 100mm outlet sizes

Meets expectations

New rectangular guttering from Lindab shares all the benefits of the established Rainline steel rainwater system:

- Quick and easy to install
- Lowest carbon footprint of any rainwater material
- Lightweight but won't crack or split
- Inexpensive and virtually maintenance free
- 11 painted colour options with 15 year warranty
- Available in unpainted Magestic galvanised finish with 10 year warranty
